

## Cleaning Tools (CTKA)

### Application:

Peyunia Supply Exothermic Welding Kits includes all the welding components typically used during welding construction. They are included: conductor cleaning brush, safety goggles, plastic tool box, spare flints, sealing putty, safety gloves, mould cleaning brush, minor burn kit, flint ignitor, safety apron (leather), earth rod driving cap (M16), handle clamp (cathodic protection), handle clamp (for type D moulds), handle clamp (for type E/F moulds), mould scraper (to suit C moulds), mould scraper (to suit D moulds) and mould support clamp.

### Specification:

Gloves is required for safety purpose as the exothermic welding melts, has more than 1400 degree celcius. the flint gun is used to ignite starting powder in order to result in exothermic reaction. We provided two brushes which are soft and hard brushes. Soft brush is used to clean mould welding cavity because its shape is very sensitive and there should not be any damage while using brush, and hard brush that is used to clean other section of mould. A Iso there is an scraper to remove the metal scrap from mould after the welding reaction.
